

# NSK Standard Ball Screws High Speed SS Series

NSK's high speed and low noise ball screws provide high-level performance for drive systems of industrial machines such as those used in manufacturing. A standard stock series assures quick delivery.

## High Speed SS Series (HSS Type); Standard ball screws, high speed and low noise enable further performance improvements to be made.

The HMS and HMD series, originally developed for machine tools, are an addition to NSK's lineup of standard ball screws. They have a wide range of applications, from general machines to high performance machines such as those requiring high speed and precision.

NSK's original recirculation system realized high speed and low noise. An optimum recirculation system has been adopted based on the lead.

SRC recirculation system is suitable for fine screw leads.

The end deflector and middle deflector recirculation system are suitable for medium leads.

### High speed

Permissible rotational speed is more than double  
d·n limit value: high speed of 160 000

### Low noise and vibrations

Noise level has been reduced by 50%: a reduction of 6 dB  
Vibration has been reduced drastically

### Interchangeability

Installation dimensions are the same as those of a conventional SS series

### Compact

Compact design created using offset preload system

### Convenience

Design flexibility has been improved by blank shaft end.  
New support units are also provided for high speed operation.

**High speed**

The new recirculation system that utilizes NSK's high speed and low noise technology more than doubles the d·n value from 70 000 to 160 000. To extend the range of the lead to 20mm, high speed operation of over 60m/min. is possible.

● Allowable feed speed of combinations of shaft diameter and lead.

Shaft diameter [mm] \ Lead [mm]	5	10	12	16	20
32	25m/min	50m/min			
40		40m/min	48m/min	64m/min	80m/min
45		35m/min			
50		32m/min	38m/min		

\*Allowable speed needs to be calculated. See the permissible rotational speed in the dimensions table.

**Low noise and vibrations**

Compared to our conventional products, the average noise level has been reduced by more than 6 dB, reducing the number of colliding balls and recirculation parts thanks to high speed, low noise technology. The vibration level of the nut has also been reduced drastically.

**Interchangeability**

Installation dimensions are the same as those of a conventional SS series

**Compact**

By improving the nut manufacturing technology, highly precise screw manufacturing is possible with the long nut. Achieved high-level stiffness and high load capacity equivalent to that of double nut preload by changing the double nut preload to the offset preload of a single nut, and compact sized nut.

● **Seal**

Adopted thin seals axially and shorten nut length

**Convenience**

● **Optional configurations are possible for ball screw length as well as for the shaft end design**

The blank shaft ends can be customized according to customers' requests. See page 11 in NSK's recommended design when drawing up plans for a shaft end. The support units are available on pages 12-14 in the case of NSK's recommended design.

● **New support unit: For high speeds and heavy loads**

The support unit is applied for the thrust angular contact ball bearing, TAC series, with high precision and rigidity. NSK design is available attached to the support unit, which easily constitutes a system.

● **Oil supply**

2 oil holes, M6×1.0, are provided in the nut flange periphery and the end of the nut flange. A plug is standardly screwed into the periphery of the nut flange.

## Ball screw specification

<b>Accuracy grade</b>	C5 of JIS B 1192 (1997)
<b>Axial play Preload system</b>	Axial play: 0 Offset preload (Z preload)
<b>Thread direction</b>	Right hand
<b>Shaft end</b>	Both shaft ends blank (No case hardening: HRC 40 max.)

## Reference No.

The reference number is an identification number or symbol used for each model. Specify the reference number when ordering, and thereafter, specify the shape of the end of the shaft indicated by NSK.

Reference No. **HSS** **40** **10** **N1D** **0950**

High speed SS series: HSS

Screw shaft diameter (mm)

Lead (mm)

Screw shaft length  $L_0$  (mm)

NSK control number

## Precautions

### ◆ Design

1. One end of the screw shaft is cut through.
2. If a ball screw of which the left shaft end (opposite the driving side) is the shape  $\bar{I}$ , and if it is supported with the "fixed-fixed" supporting method, you should be aware that the operating life of support bearings may shorten due to thermal expansion of the screw shaft, depending on usage conditions. In this case, you should consider a structure that can accommodate thermal expansion of the screw shaft if necessary. Please consult with NSK for a detailed examination.
3. For general precautions concerning ball screws, please check NSK Catalog No.E3162 "Precision Machine Components".

### ◆ Usage

1. Instructions for shaft end processing  
The high speed SS series has a straight cut shaft end. Therefore, during actual use, the end of the shaft must be machined according to the customer's specifications. NSK recommends designated suppliers that offer quality assurances and precision guarantees. If any other supplier carries out processing, NSK will not provide a precision guarantee.
2. Service temperature environment of 60°C or less (at the nut outer temperature)
3. Only a rust preventive agent is applied at the time of delivery. Please apply lubricant, oil or grease before using.
4. The seals are installed on the end of the nut with the ball screw shaft. However, the ball screws should be provided with a dust cover to prevent debris such as dust and metal powder from entering.
5. If the nut accidentally comes off the screw shaft, please contact NSK.

**New support unit (For high speed and heavy load)**

Heat generation has been reduced via adoption of a low preload type bearing. Along with speedup of the ball screw, permissible rotational speed have been improved.

The new support units are assembled with the thrust angular contact ball bearings, TAC series, which are a high precision, high rigidity, high speed type with the most suitable function and structure. The bearing combination comes in three types as shown in the figure below

**Support unit reference No.**

- Note:
- Rigidity: Values in the table are theoretical and obtained from the elastic deformation between ball groove and balls.
  - Starting torque indicates torque due to the preload of the bearing. It does not include seal torque.
  - h5 class of the fits tolerance is recommended.
  - Pilot diameter and tapped screws marked with "\*", are used for seal unit installation for NSK standard hollow shaft ball screws. They can also be used for the dust cover and damper installation.
  - Grease is packed into bearings. It is not necessary to apply grease before use.
  - Installation torque of a set screw 490[N·cm] (Reference value)
  - The locknut has been designed to stay fastened, but it may come loose if a machine has strong vibrations. Apply construction adhesive as necessary.
  - Allowable axial load is 0.7 times of the permissible axial load in the dimension table.

Parts list

Parts No.	Part Name	Quantity
①	Housing	1
②	Retaining Cover	1
③	High accuracy thrust angular contact ball bearing	One set
④	Dust seal	2
⑤	Collar	2
⑥	Preload bolt	6 or 8
⑦	Shim	One set
⑧	Lock nut	1

- NSK support units are precisely preloaded and adjusted. Do not disassemble components ①, ②, ③, ④, ⑥ or ⑦.
- Lock nut ⑧ has been exclusively prepared for ball screws. The end surface of the nut is positioned precisely perpendicular to the V thread. Secure the lock nut using a set screw.
